

Information for Visitors Who Have Influenza Symptoms

Please do not visit your friends and family who are hospitalized if you are sick.

If you must visit, put on a surgical mask as soon as you enter the hospital.

- Clean your hands with hand gel or wash with soap and water every time you enter and exit a patient's room. Practicing good hand hygiene is the first step in preventing the spread of infection
- Before entering a patient's room, clean your hands and put on a surgical mask.
- Please try to stay in the patient's room once you have arrived. Do not visit common areas of the hospital such as waiting rooms, gift shops, or food service areas.
- Remove your mask whenever you leave the room. Remember to clean your hands with hand gel or wash with soap and water. **You must then put on a new surgical mask.** Please remember that the mask must stay on until you leave the hospital.

Thank you for helping to keep our patients healthy and safe
